Founded (year) 2019

Cellerna Bioscience GmbH provides synthetic messenger RNAs (mRNAs) via PureBoost™ technology which maximizes protein expression and minimizes mRNA immunogenicity. PureBoost™ is a proprietary technology that combines novel advanced capping and ultra-purification processes of in vitro-transcribed mRNAs that have been optimized for robust protein expression. Apart from specializing in the synthesis of any synthetic mRNA with custom modifications, Cellerna also provides most derivatives of synthetic DNA and RNA.
