Founded (year) 2017

Epcotec GmbH was founded in 2017 in Aachen Germany as an engineering company with a team of highly qualified specialists to provide professional support projects in technical textile for BIOTEX and MEDTEX materials. After initially focusing on laboratory solutions, the spectrum of our services is expanded to include machines and systems on an industrial scale and even large turnkey projects in High-tech technology in Plasma and Nano fiber.

EPCOTEC GmbH and his German partners have been active in various areas of nanofibers and plasma for more than 15 years and have the goal of further developing this technology not only for academic research purposes, but also to improve real commercial applications for mass production.

Currently, several industries around the world have already applied this technique to the development of new product innovations, particularly in the areas of tissue development, medical applications, encapsulation of food, insulation materials, energy conversion and storage, air and water filtration, among others.
