---

ImProvia Germany GmbH, founded in 2018 under the name FMI Industrial Modules GmbH, is the German engineering office within the FMI ImProvia Group.

We are passionate engineers who face new challenges every day to find the best possible solutions for our customers. We design, produce and assemble integrated systems, mechanical and mechatronic modules, production lines, complex tools and high-end components for the semiconductor, medical and high-tech industries.

Our team is involved in the early stages of design and development and remains part of the project – from the idea, through rapid prototyping, to the finished product.

We offer our customers solutions that are as simple as they are intelligent and cost-effective when situations or environments start to become complex.
