Employees 1

Founded 2024

We support medical technology start-ups efficiently on their way to becoming medical device manufacturers. Together, we uncover blind spots and create a clear roadmap for their next steps. With many years of industry experience in the medical technology sector, we can quickly and pragmatically illustrate the regulatory requirements of medical technology using practical examples and support our clients in obtaining approval for their products. In addition, we offer services in product development, production planning and process optimization.
