Future-focussed technology for life-sustaining medical devices

AC Aircontrols is an international R&D service provider, producer and supplier of technical innovations for the medical devices industry. We are supporting development and manufacturing of pneumatic and electronic control systems for life-sustaining medical devices.

This includes control modules and systems which are used in e.g. anesthesia and emergency ventilators. Furthermore we develop pneumatic drives for surgical instruments. The scope of services of our certified company includes solutions designed for medical applications such as precise miniature pneumatics with corresponding hardware and software as well as project planning, construction and manufacturing of corresponding assemblies.
